

# Integration with Handheld GPS Devices

Real-time location data of your remote workers

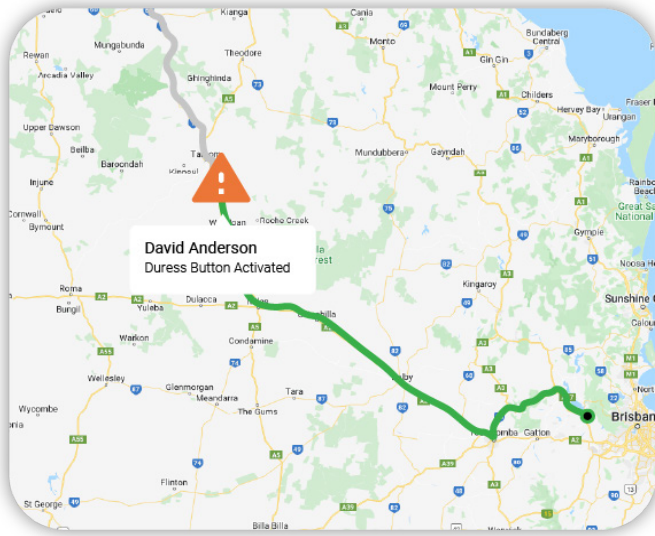

JESI and Handheld GPS Devices together, provide complete visibility of your workers no matter where they are.

If a duress/SOS button is activated, or a Check-In is missed, an escalation process is triggered.

## How the JESI and Handheld GPS Device integration works

1. The User enters their journey into JESI and completes a Risk Assessment
2. When the journey commences, the device will feed critical data into the JESI application
3. Once the User arrives at their checkpoint, they Check-In with JESI on their mobile or Handheld GPS Device

## Monitoring Activities

If a Dures/SOS button is Activated or a Check-In is missed, an Escalation process is triggered.

## Dashboard & Analytics

Managers can search for a worker's location in the Activity Dashboard, creating a digital people movement board.

STATUS	USER	SHARE LOCATION	START TIME	NEXT CHECK-IN	CHECK-IN TIME
ACTIVE	Angela Kim	Mine Site A	3 hours ago	Mine Site A	in 2 hours
ACTIVE	Aaron Blain	Townsville CLD	2 hours ago	Maitland VIC	1 hour ago
MISSING	Aree Filby	New York USA	16 days 21	Melbourne VIC	17 Jun 21
MISSING	Aree Filby	Chairo CLD	16 June 21	Townsville CLD	16 Jun 21
