

Integration with Global Vehicle Telematic Devices (IVMS)

JESI and Vehicle Telematics (IVMS) together, dramatically accelerates emergency response times.

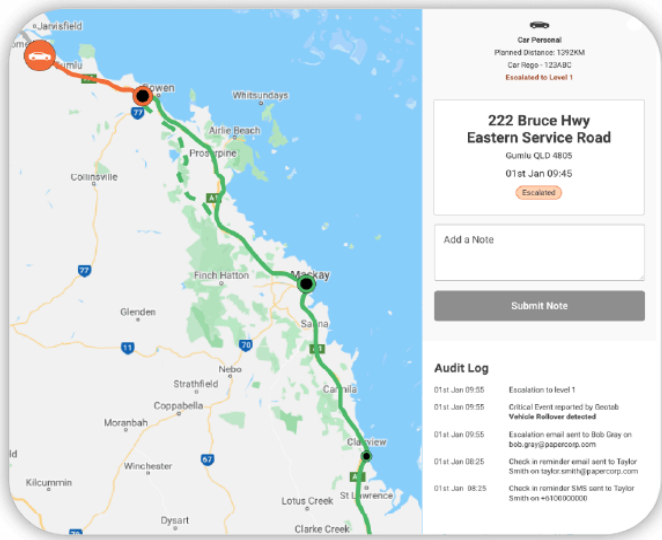

JESI and Vehicle Telematics, enables a seamless digitised Journey Management Plan for remote workers and a centralised dashboard for vehicle tracking.

Delivering a robust safety solution for workers on the move.

How the JESI and IVMS integration works

1. The User enters their Journey into JESI and completes a Risk Assessment
2. When FOB is activated, the vehicle will automatically register with JESI
3. Once the User arrives at their checkpoint, they check-in with JESI

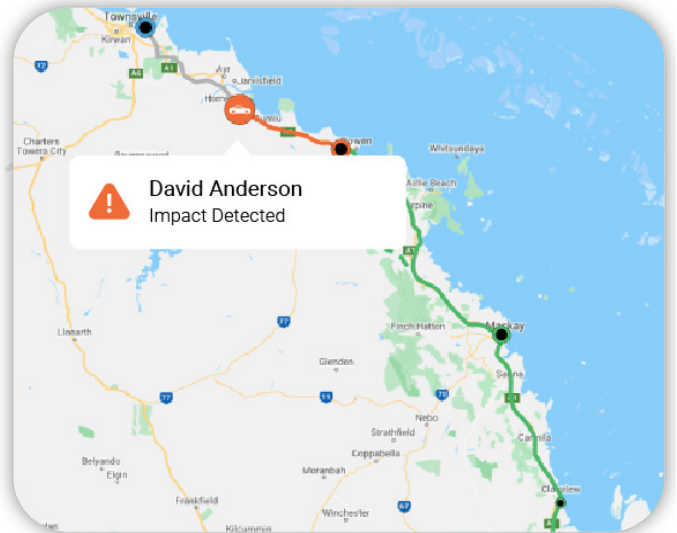

Audit Log

If the Journey Escalates, a Manager can use the centralised map to view the last known location of the vehicle.

Vehicle Impact

Critical vehicle data feeds into the JESI application and triggers an Escalation process to notify Escalation Contacts.

Our Integrations

JESI has built integrations with highly reputable and global IVMS providers.
